Better diabetes and cardiovascular services

This graph represents the average progress made by a DHB towards three target indicators: (a) an increased percent of the eligible adult population will have had their cardiovascular disease risk assessed in the last five years; (b) an increased percent of people with diabetes will attend free annual checks; (c) an increased percent of people with diabetes will have satisfactory or better diabetes management.

* Quarter two results are based on updated diabetes prevalence figures. For the purposes of comparison between quarters one and two, the published quarter one results have been recalculated using the updated diabetes prevalence figures.
