Better diabetes and cardiovascular services

This graph represents the average progress made by a DHB towards three target indicators:

- an increased percent of the eligible adult population will have had their cardiovascular disease risk assessed in the last five years;
- an increased percent of people with diabetes will attend free annual checks;
- an increased percent of people with diabetes will have satisfactory or better diabetes management.

Canterbury DHB's performance has not been ranked in four of the six health targets in acknowledgment of the impact of the earthquakes on the DHB's year-end results.
